Our Modern Treating Plant

Installed under the supervision of both the U. S. Department of Agriculture and Virginia Experimental Station. These departments realizing the urgent need of farmers only using treated seed, have given much of their time and effort in perfecting this machine. Our customers can fully depend on Wood's Seed producing clean, large yielding crops that will bring top prices at market next harvest.

Over 45,000 bushels of seed grain were treated by us last fall, and the many reports received of the wonderful control of disease and high quality crops made, is good evidence of this real service to farmers.

Plant in the fall, transplant to cold frames and set out early in the spring.

WOOD'S CROP SPECIAL

Wood's Flower Seeds for Summer Planting

FOR FULL DESCRIPTIONS SEE OUR ANNUAL CATALOG.

In the South perennials, biennials and hardy annuals may be sown outside in the fall. These sowings make finer plants, earlier, larger and more brilliant blooms. Annuals should have a slight covering in extreme weather; tender perennials should be carried through the winter in the house.

Prepare the ground as fine, smooth and level as a rake will make it; plant in rows so the young plants may be easily seen; cover lightly—a good rule is to cover four to six times the diameter of the seeds; very fine seeds should be pressed into the soil.

Half hardy varieties (marked H H) need protection; varieties marked (T) tender, should be wintered in the house.
